Corporate Profile

Introduction

Binary Vibes Information Technologies Pvt. Ltd. is a software company based in Bangalore, India. The company was incepted in the month of December 2006 incorporated under the Companies Act, 1956(No. 1 of 1956) and the company is limited. The company is better known as 'Binary Vibes' in the industry.

Mission To propagate the power of connectivity and communication of the Internet and computing technologies to help organizations and individuals to accomplish tasks in the quickest, easiest and most efficient manner.

Vision To deliver the benefits of web technology to organizations and individuals and to significantly contribute to the open source community.

Areas of Operations

Binary Vibes offers web hosting, application development and IT infrastructure services primarily using GNU/Linux, Apache, MySQL and PHP technologies. The company believes in the open source movement and is a staunch supporter of open source technology stack called LAMP.

About LAMP The acronym LAMP refers to a solution stack of software, usually free software / open-source software, used to run dynamic websites or servers. When used in combination they represent a solution stack of technologies that support application servers. The combination of these technologies is used primarily to define a web server infrastructure, define a programming paradigm of developing software, and establish a software distribution package.¹ LAMP stands for Linux, Apache, MySQL and PHP/Python.

Services

Domain Name Registration And Web Hosting

Binary Vibes is associated with many organizations that have authority to create and manage gTLDs and ccTLDs. Empowered by these associations Binary Vibes can create and manage .com, .net, .org, .in, .co.in, .uk and host of other TLDs on behalf of its customers.

Web And Mail Hosting: Binary Vibes has co-located and rented several servers in various commercial data centers in the US and other countries. These servers are managed from Binary Vibes office in Bangalore. Binary Vibes allocates infrastructure resources to its customers across these networks of servers. The resources are packaged in terms of disk space, bandwidth and other resource parameters. This world class network enables Binary Vibes' customers to use web and mail

services for their domains.

Web Application Development

The talented programmers at Binary Vibes develop web applications that empower organizations to automate business processes. Leveraging on these cutting edge PHP/MySQL web applications Binary Vibes' customers increase their employee productivity, customer satisfaction and overall business efficiency, thus leading to higher profits.

Open Source Software Solutions

In the open source software industry there are astronomical number of projects and products available for free. These open source software cater to the needs of businesses. Utilizing free and open source software often requires professional consulting. Few notable strengths of Binary Vibes in this area are evaluating, customizing, deploying and maintaining open source software. Binary Vibes pioneers in providing web solutions based on popular open source content management systems and rapid application development frameworks.

Infrastructure Services

Organizations invariably depend on information technology to achieve business objectives quickly and efficiently. Binary Vibes empowers your IT systems by deploying the Linux platform. Combining the power and freedom offered by Linux and other open source software, Binary Vibes helps organizations to effortlessly build and manage robust, secure, scalable and manageable IT infrastructure. File and print, web, mail, proxy/routing, load balancing, firewall, database and application services are few examples of popular open source software solutions.

Products

Binary Vibes also develops software products primarily using PHP programming language and MySQL database server. CRM, ERP, time tracker, leave management, newsletter system and few others customer demands are met by Binary Vibes products. Below is a list our products:

- BizSense - CRM and ERP
- Hospo - HIS system especially suited for small hospitals and clinics
- Binac - Binary Vibes Internet Access Control

Customers

Binary Vibes has an array of satisfied and loyal customers worldwide. Binary Vibes pragmatically uses telecommunication and Internet as the medium to deliver services to global clients. Live chat, e-mail ticketing, phone, fax and web portals are various customer service channels adopted by Binary Vibes. These tried and tested systems are often appreciated by customers.

Management

Binary Vibes was founded by technical and management subject matter experts. The management team are often engaged in enhancing internal business processes, productivity and skills of employees.
